## **SUPER DEDUCTION SAVING YOU 25%.....**

In the recent budget, it was announced that the government would be introducing a new incentive to encourage businesses to invest in plant & machinery called the SUPER DEDUCTION

## **WHY ARE GOVERNMENT DOING THIS?**

- Since the Covid-19 pandemic, existing low levels of business investment have fallen, with a reduction of 11.6% between Q3 2019 and Q3 2020.
- Much of the UK's productivity gap with competitors is attributable to our historically low levels of business investment compared to our peers. Weak business investment has played a significant role in the slowdown of productivity growth since 2008.
- Making capital allowances more generous works to stimulate business investment. As a result, these measures can promote economic growth and counter business cycles.
- The super-deduction will give companies a strong incentive to make additional investments, and to bring planned investments forward.

## **HOW DOES THIS HELP YOU?**

This gives us a unique opportunity to promote our offering at a significantly reduced rate using the tax rebate as a discount!

To be clear, you as the customer would pay full price (we would not apply the super deduction) and your company must be earning profits to accommodate the rebate as detailed in the government directive meaning you will effectively receive our potentially life saving product for around a 25% reduction!!!!

## **INSURANCE.....**

Working closely with our insurance brokers we have a unique policy to the industry and can proudly say we now have Professional Indemnity insurance that gives all our clients the confidence our product does exactly what the team at Invisible Bubble claim and is backed by a £5,000,000 policy.

# INVISIBLE BUBBLE™

The invisible bubble, is a unique and easily installed device for the deactivation of airborne viruses and pathogens. Including SARS-COVID-2, the virus that causes COVID-19.

Utilising the latest in UV-C technology and patented methods we can effectively deal with the growing threat of airborne viruses and pathogens within indoor environments.

The Invisible Bubble unit sanitises the air fully within the unit, not allowing any potential harmful UV-C light to escape, making it safe at any level. The microprocessors within the unit constantly monitor to allow for the exact dosage of UV-C to be applied which is known to kill 99.9% of bacteria and viruses.

Through the use of, both medical grade HEPA-13 and Activated Charcoal filters, the Invisible Bubble filters out 99.9% of the Invisible Bubble removes allergens, pollens and unpleasant odors. The same filters help minimise the amount of dust in the air.

- **SANATISE YOUR AIR**

- **MAKE A DIFFERENCE**

- **KILL COVID-19**

A RECENT STATEMENT FROM

**NHS**

Partners in Health

*“We are delighted to announce that Creative Product Innovations LTD is proud to supply the NHS with its Invisible Bubble technology for infection prevention and carbon reduction technology.”*

*The Invisible Bubble technology from Creative Product Innovations LTD represents a step change in infection prevention. Having the ability to provide CND (continuous non-depleting decontamination) of both Air and surfaces.*
